Summary Post

36 secs ago

In my initial post, I posted that Research must be driven by a specific question that has to be addressed without bias (Alfonsi, 2012) and Abi is bound by an ethics code as an independent researcher. This involves refuting any biased assertions made in light of his research. He owes it to his profession to protect his name and reputation from being tarnished by those who intentionally attempt to skew his results in one way or the other.

When carefully examining the presented situation and the various opinions and replies of my fellow students, it can be concluded that accuracy and ethics are crucial factors in the overall standard and accomplishment of study.

In conclusion, it can be stated that there are many ethical considerations to make when conducting research. The appropriate laws and regulations that apply to their field of study should be considered by researchers, who should also keep in mind their fundamental moral and societal obligations.
