

Minutes 06/02/22

Wimal: Having issues with Burp Suite scanner.

Shan: Are we scanning against the IP or the name?

Hendrik & Wimal: Using the name (readmyblog.co.uk)

Shan: Might raise the issue with IT support.

Wimal: Mentioned that we can mention the limitation in our scanning process to add it to the documentation.

Shan: Agreed based on the feedback from the professor. Continued talking about the methodology section that needs to be rewritten. Basically, more about the website and its vulnerabilities and less about the tools.

Shan: Mentioned that we can reference the OWASP top 10 in the documentation.

Shan: If we don't get Arachni to work, we leave it out of the report (ongoing scan by Hendrik).

Hendrik: Mentioned getting blocked with too many requests in succession on previous attempts.

Shan: Maybe we can add this information(scan difficulties) to the document. Cut off date for the Arachni scan is Wednesday.

Wimal: Will also stop further scanning by Wednesday (Burp Suite) and then if only a partial report is available, then this will be used.

Shan: Afterwards we will focus on further research and recommendations. Will get started on the report today and then ask for feedback on the paper by Monday evening. Mentioned that Sharon needs to write more about GDPR. Need to be more clear in what principles are not being followed by the website.

Wimal: Mentioned that we should focus on the criticality of the document, based on the feedback on our previous document.

Shan: Will mention this to the professor on Saturday.
