Meeting-30-01-22

Shan: Checking in with everyone.
Wimal: Updated the document with new information and busy with the scanning for the burp suite.
Shan: Asking how the scanning is going for everyone?
Hendrik: Scanning is being a bit of an issue. Scans dont finish due to timeouts.
Shan: Explained why this may be the case.
Shan: Asking the difference between the tools arachni and owasp zap?
Shan: Stating that we should be clear with why we choose the tools that we are.
Shan: We need to get enough data in the paper so that the professor can comment. Zapping the top 10 2021, to double check if the automated scan is running sufficiently for the top 10. Take a screenshot of the owasp zap configuration to showcase that we are able to cover the top 10 and to use it in the methodology.
Hendrik: Will do this.
Wimal: Using the burp suite for scanning. Will have results ready by the middle of the week.
Shan: Post a screenshot of how we configured the scan and afterwards, we will post the vulnerabilities and how we calculate them.
Shan: Suggesting that Sharon needs to do further GDPR research.
Hendrik: Will send the configuration of ZAP today.
Shan: Will continue working on adding content to the document.
